Metallic® ThreatWise™

# Early Warning Ransomware Detection

Data Protection starts before you're compromised. With ThreatWise™, you get fully-integrated cyber deception technology, that's seamlessly paired with our award-winning Metallic® DMaaS. Now, businesses of every size can spot and contain ransomware attacks before data leakage, encryption, or exfiltration.

Intelligent Cyber Deception

✓ Detect and divert attacks in early, before they cause harm

✓ Engage and surface advanced, zero-day, and unknown threats

✓ Respond faster – to safeguard data sooner

Indistinguishable Decoys

Rapidly deploy threat sensors across surface areas – to protect on-prem, cloud, and SaaS environments quickly. Mimic real assets and bait bad actors into compromising indistinguishable, look-alike decoys.

- Deploy threat sensors at scale, creating decoys in bulk
- Mimic critical assets with preconfigured sensors
- Emulate highly specialized assets, unique to your environment
- Lure bad actors into engaging fake resources

Accurate Alerting

Get immediate, precise, and early visibility into malicious activity, before threats reach your data. Flag recon, lateral movement, unwanted privileged access that bypasses conventional technology.

- Expose sensors to bad actors only, invisible to legitimate users and systems
- Provide key stakeholders with immediate insight into active and latent threats
- Gain critical intelligence into activities and tactics
- Eliminate false positives and alert fatigue
- Integrate alerts with top security solutions (ie - SIEM)

Infinite Scalability

Leave complexity behind. Deploy lightweight decoys in minutes and scale in seconds – for comprehensive coverage across data estates. Built with industry-leading security baked-in.

- Reduce complexity, costs, and infrastructure footprint
- Rapidly deploy, for immediate surface area coverage
- Leverage proven, multi-layered and zero-trust security in the cloud

Supported Sensor Type

Preconfigured Sensors
- Servers
- Cloud
- Networking
- IoT

Industry-Specific Sensors
- Financial
- Industrial
- Healthcare

Adaptive Sensors
- Fingerprint any highly specific assets and deploy a deceptive replicate in minutes

Lures
- Deceptive files
- AD entries
- Search History
- and more
