

RestoreManager

Recover ONTAP file systems in minutes, not hours

IT departments are often faced with the problem of how to find and restore specific file backups. These files may be there, but it's complicated to search for them because there is no central index. Designed for ONTAP storage clusters, RestoreManager creates a central catalogue of files and relevant snapshots enabling detailed search by name, file type, date, or size.

Key functionalities

-  Criteria-based **search** for lost files or folders in ONTAP Snapshots.
-  **Integrates** with Primary and Secondary storage systems.
-  **Saves you time** with no manual searching through directories.
-  One-click **restore** from native storage snapshots.

Easy fast data recovery!

Say goodbye to searching for one file out of a million. RestoreManager makes it simple to restore files with a single click. Curious to learn more? Email info@prolion.com to learn more today.
