

Large London based healthcare provider

Customer Challenge:

- Compliance with an updated stringent security policy required higher levels of encryption and new immutable copies across all types of datasets.

Successful Outcome:

- Already working with SNS on the rollout of additional elements within their Commvault environment a multiple options were examined.
- By utilising a combination of software features on Commvault and by creating an additional backup tier using Cloudian we were able to meet all the requirements

Customer Benefits

- Leverage existing investments whilst adding immutability
- Simplified management with no tapes
- Meet stringent security and data protection requirements
